Morelli Car Park - Naples - Italy

Surrounding

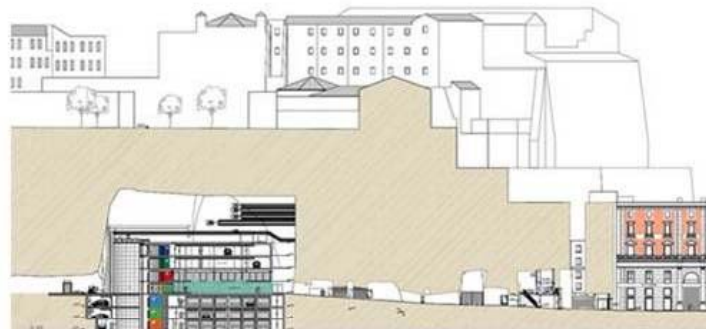

The position of the car park inside an existing cavern, connected to an ancient tunnel, dating back to the XVII° century, makes the car park an episode of urban prominence, that connects different urban spaces: the congested zone of Piazza dei Martiri with the Naples underground and its ancient footpaths.

Morelli Car Park - Naples - Italy

Structure I

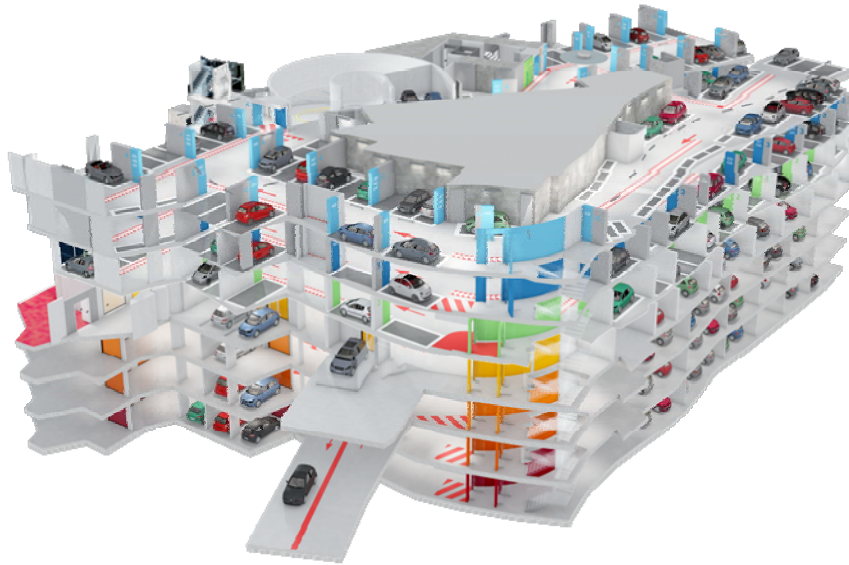

Design process was focused on the relationship between existing cavern and the new building.

The visible portion of the cavern is in the same time the external of the car park and the internal of the urban site.

Morelli Car Park - Naples - Italy

Structure 2

- The new building inside the cavern has now 7 levels: three for private garages, three for public parking, one for car valet service
- Car access is enabled through three tunnels. The one from Morelli square is the entrance to the public parking levels; a second one for car access to private box levels and a third one is the exit for the whole structure
- Vertical access to different levels is enabled through a two-way circular ramp
